Conducted onsite to inspect new construction stormwater BMPs for well pad (perimeter berm, diversion trenches, straw wattles, and other spill stormwater control equipment) and access road (borrow ditch for sediment control), which are in-place and these stormwater controls indicate no offsite migration of fluids or sediment; operator will be abandoning recently drilled and completed well, and will be drilling one additional well sometime in early 2019; site should be inspected once the new well is drilled, completed, flowline tested, and on production.
