## COMMENTS:

SG is proposing to temporarily store 2 500 BBL frac tanks on the FEDERAL-611S90W location (aka Federal 11-90-35 #1). The frac tanks will be used to stoage brine water for drilling the Eck 12-90-1 #1 laterals and sidetracks in the Bull Mountain Unit. No new surface disturbance will be required to store the frac tanks. The stored brine water will be trucked to the Eck via a smaller water truck to address safety concerns of using larger trucks on the steep, narrow road. No pipelines would be used. Temporary spill containment berms will provide secondary containment for the tanks. The containment berms are made of polyethylene or a similar puncture-resistant material sufficiently impervious to contain any spilled or released material under and around the frac tanks. The secondary containment will be of sufficient size to contain any spilled or released material. The temporary frac tanks are expected to be on location for approximately four months.
