Kris,

Attached is the test data (closure data pkg) to show that spill doc number 2147490 (UP 54-21 spill that occurred on 1/22/2014) has met the Table 910-1 requirements.

For Reference I have attached a pdf copy of some of our internal documents showing the spill path (UP 54-21), and the initial form 19 submittal with the supplemental information (Scan 005).

Please let me know if there is additional information needed to close the spill.

Thanks,

Mike Haub
