

Plan of Development

The DOE 1-M-18 Cuttings Management Area will be construction south of the proposed DOE 1-M-18 Production Pad and will be utilized for primary storage of drill cuttings from the fifteen (15) proposed wells on the DOE 1-M-18 Well Pad. Estimated cuttings storage capacity for this location is ±4,000cy of cuttings. Drill cuttings will be hauled to location by truck. Topsoil will be stripped from the proposed cuttings management area and stockpiled along the south side of the pad. Storm water BMPs will be installed around the perimeter of the pad. Please see the construction layout for DOE 1-M-18 Cuttings Management Area and/or the DOE 1-M-18 POD for additional details.
