Hi Diane,

On the Vollmer 8-17 (API #: 05-123-15658) after pumping our Sussex squeeze we had pressure in the surface casing. We would like to set a CIBP at 2500' and dump bail 5 sx on top of that. We will cut casing at about 2400' (instead of 1200'), and then pump 240 sx as an open hole plug from 2400'-2000' with a 1.15 yld. We will wait the appropriate 8 hours and then tag the plug. If we don't have pressure we will then pump our stub plug from 1142'-453' (Total of 440 sx at a 1.15 yld). We will also WOC and tag and pressure test the plug. Would this be okay?

Thank you,

Jensine Doyle
