Russell et al:

You are approved as requested. If you encounter problems getting to 3500', please give me a call.

Thanks,
Steve

Steve,

We will be moving on the LF Ranches #1 next week to reenter and plug. The approved procedure calls for a plug at the top of the Niobrara, approximately 6500'. In the previous two reentries we had problems getting cleaned out to 3500' and set the deepest plugs at 3500' (UPRR C#1 05-123-051139) and 1540' (UPRR Pan Am 55-1, 05-123-07249). We would like your approval to do the same at the LF Ranches, clean out to 3500' if possible set the first plug there then set the second plug 400' to surface.

Thanks,

Russell Schucker
