## Best Management Practices

### No BMP/COA Type

### Description

1	Planning	An existing well on the pad, the N. Parachute CP08D-03 A03-59 was logged with open-hole resistivity log with gamma-ray, from TD into the surface casing. All wells on the pad will have a Cement Bond Log with cased-hole Gamma Ray run on the production casing. The Form 5 Completion Report will list this log run for each well and identify N. Parachute CP08D-03 A03-59 (API No. 05-045-13024) as the well that was previously logged with the open-hole resistivity tool.
2	Drilling/Completion Operations	Closed loop system will be used. No pits will be built. Caerus will ensure 110 percent secondary containment for any potential volume of fluids that may be released.

Permit	Changed the 317.p BMP as directed by operator. Final review complete.	07/03/2018
Engineer	Offset water well check: COGCC evaluated offset water wells within one mile of this proposed well's surface hole location. This information was used in addition to locally-available geophysical logs and hydrogeologic information to evaluate the adequacy of the operator's proposed surface casing setting depth. Water wells within one mile are shallow wells drilled to investigate environmental impacts and are not used for water supply.  Offset Well Evaluation: Existing offset oil and gas wells within 1,500 feet of the wellbores on this pad meet standards. No mitigation required.	06/27/2018
Permit	Passed Completeness.	06/05/2018
