## OPERATOR COMMENTS AND SUBMITTAL

Comments The nearest wellbore completed or permitted in the same formation is Bison's proposed Jamaso 4-65 5-6-7, approximately 400 away. The attached anti-collision report, labeled "other" was used to determine the distances to the nearest wellbore within the same formation and nearest well belonging to another operator.

Distances measured between the proposed wellbores and other proposed wellbores on the same Jamaso pad were reported on the offset well evaluation per the anti-collision report.

### No BMP/COA Type

### Description

1	Drilling/Completion Operations	Anti-collision: Operator will perform an anti-collision evaluation of all active (producing, shut in, or temporarily abandoned) offset wellbores that have the potential of being within 150 feet of a proposed well prior to drilling operations for the proposed well. Notice shall be given to all offset operators prior to drilling.
2	Drilling/Completion Operations	317.p - One of the first wells drilled on the pad will be logged with open-hole Resistivity Log and Gamma Ray Log from the kick-off point into the surface casing. All wells on the pad will have a cement bond log with gamma-ray run on production casing (or on intermediate casing if production liner is run) into the surface casing. The horizontal portion of every well will be logged with a measured-while-drilling gamma-ray log. The Form 5, Completion Report, for each well on the pad will list all logs run and have those logs attached. The Form 5 for a well without open-hole logs shall clearly state "No open-hole logs were run" and shall clearly identify (by API#, well name & number) the well in which open-hole logs were run.
