Description

1	Drilling/Completion Operations	Rule 317.p: One of the first wells drilled on the pad will be logged with open-hole resistivity log with gamma-ray, from TD into the surface casing. All wells on the pad will have a cement bond log (CBL) with gamma-ray run on production casing (or on intermediate casing if production liner is run) into the surface casing. The Form 5, Completion Report, for each well on the pad will list all logs run and have those logs attached. The Form 5 for a well without open-hole logs will state "No open-hole logs were run" and will clearly identify the type of log and the well (by API#) in which openhole logs were run.

Permit	Final Review Completed.	07/20/2018
Permit	Per operator: Corrected distance to nearest lease line and checked "is committed to an O&G lease." Corrected distance to nearest unit boundary, added unit description, and removed unit acreage.	07/20/2018
Permit	Confirm distance to nearest lease line and surface & minerals tab checkboxes. Confirm distance to nearest unit boundary and unit acreage.	07/06/2018
Engineer	Offset water well check: COGCC evaluated offset water wells within one mile of this proposed well's surface hole location. All permitted water wells within the search radius show zero for reported depths. The offset shallow logs run in the Pargin Mountain Unit #11 gas well (API#067-06140) which is located on the same pad as this proposed well does not reveal any fresh water aquifers deeper than the operator's proposed surface casing. Offset Well Evaluation: Offset oil and gas wells within 1,500 feet of this wellbore meet standards.	06/11/2018
