1	<p>Colorado Parks & Wildlife (CPW) has mapped potential and burrowing owl nesting habitats and a sensitive creek located in and near this proposed development.</p> <p>If prairie dogs are present, then CPW recommends that the operator survey for burrowing owls if initial site disturbance will occur in prairie dog towns during the owl's nesting season (March 15 through October 31). Burrowing owl survey protocol can be found here: https://cpw.state.co.us/Documents/WildlifeSpecies/LivingWithWildlife/RecommendedSurveyOwls.pdf</p> <p>CPW also has a mapped Recovery and Conservation Water along the nearby creek, which contains some species of Eastern Plains native fish. Therefore, CPW recommends that the operator ensure that site development (and supporting features such as access roads) are located at least 300 feet from the edge of the edge of the riparian area (not the center of the creek).</p> <p>CPW appreciates the collaboration, as we strive for responsible energy development while protecting sensitive habitats.</p> <p>Should the operator have any questions and/or request a site visit with CPW, please contact CPW's Northeast Region Energy Liaison (Brandon Murette) at (303) 291-7327.</p>	06/13/2018
