Verify production casing cement coverage with a cement bond log.

Best Management Practices

No	<u>BMP/COA Type</u>	<u>Description</u>
1	Drilling/Completion Operations	One of the first wells drilled on this pad will be logged with an open-hole resistivity log with gamma-ray, from TD into the surface casing. All wells on the pad will have a cement bond log (CBL) with gamma-ray run on production casing (or on intermediate casing if production liner is run) into the surface casing. The Form 5, Completion Report, for each well on the pad will list all logs run and have those logs attached. The Form 5 for a well without open-hole logs will state "No open-hole logs were run" and will clearly identify the type of log and the well (by API#) in which open-hole logs were run.

Permit	Corrected right to construct from lease to Right of Way with operator concurrence. Attached ROW application to BLM from operator. Corrected disposal description from "Other" to Commercial Disposal" and removed operator comments with operator concurrence. Final review complete.	08/20/2018
Permit	Although there are producing wells on the pad, operator prefers to run logs on one of the new proposed wells as stated in BMP.	08/07/2018
Engineer	Offset Well Evaluation: Existing offset oil and gas wells within 1,500 feet of the wellbores on this pad meet standards. No mitigation required. Offset water well check: COGCC evaluated offset water wells within one mile of this proposed well's surface hole location. This information was used in addition to locally-available geophysical logs and hydrogeologic information was used to evaluate the adequacy of the operator's proposed surface casing setting depth. The deepest water well within one mile is 35 feet.	07/23/2018
Permit	Preliminary review complete.	07/11/2018
