No	SURFACE WATER	N/A	N/A

## INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

A soil boring assessment was conducted, per approved 27 (document # 401621714): 13 soil borings were advanced to a total depth of 15 feet adjacent to previously identified contamination based on Table 910 limits (document #2496197). Three soil borings had elevated TPH concentrations @7.5-10'. A grab groundwater sample was collected from previously installed MW-01R. The sample did not contain concentrations of BTEX above applicable Table 910 limits.

## PROPOSED SAMPLING PLAN

### Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

13 soil borings were advanced to a total depth of 15 feet adjacent to previously identified contamination based on Table 910 limits (document #2496197). 25 soil samples were collected during assessment activities and submitted for laboratory analysis. All soil samples were analyzed for GRO, DRO, RRO, naphthalene, and BTEX following modified EPA methods 8260c and 8015, and pH, EC, SAR, following EPA Method 9045D, USDA Method 3, and USDA Method 20B. Additional grab soil samples will be collected during source removal activities. All source excavation soil samples will be analyzed for GRO, DRO, RRO, naphthalene, and BTEX following modified EPA methods 8260c and 8015.

### Proposed Groundwater Sampling

☒ Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

A grab groundwater sample was collected from previously installed monitoring well MW-01R. The grab groundwater sample was submitted for BTEX analysis following EPA Method 8260c.

Grab groundwater samples will be collected from the base of the source excavation in lieu of saturated soil samples. The groundwater samples will be analyzed for BTEX following EPA Method 8260c.

### Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

## OTHER INVESTIGATION INFORMATION

☒ Were impacts to adjacent property or offsite impacts identified?

Elevated TPH concentrations above 910-1 regulatory limits were observed in a soil boring advanced adjacent to the previous Rider #1 facilities.

3 soil borings were advanced adjacent to the previous Rider #1 facilities as background comparison of soil concentrations.

☐ Was investigation derived waste (IDW) generated as part of this investigation?

Volume of solid waste (cubic yards)

Volume of liquid waste (barrels)

☐ Is further site investigation required?

# REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No \_\_\_\_\_

## SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Source removal will be completed through excavation of impacted soil above 910-1 standards.

## REMEDICATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Source excavation activities will be completed adjacent to petroleum hydrocarbon impacts identified during assessment activities on May 17, 2018. Limited excavations are proposed (~10' by ~10' by 11' bgs) around soil borings SB-03, SB-07 and SB-11. Soil samples will be collected from each side wall per COGCC procedures (1 per 30 linear feet). As the excavation is proposed to extend into groundwater at the site, grab groundwater samples will be collected from the base of the excavation in lieu of saturated soil samples. The grab groundwater samples will be submitted for BTEX analysis following EPA Method 8260C.

Soil samples will be submitted for laboratory analysis of BTEX, naphthalene, GRO, and DRO following modified EPA Methods 8260c and 8015. The grab groundwater samples will be submitted for BTEX analysis following EPA Method 8260c. Additional grab groundwater samples will be collected from MW-01R to continue monitoring natural attenuation at the site. All samples were/will be submitted for BTEX analysis following EPA Method 8260c.

Based on laboratory analytical results, NFA can be requested if all samples are observed below applicable COGCC Table 910-1 regulatory limits.
