Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

At approximately 0420 on 9/1/2018 flow hands at the Janet 3&4 (located on Gregory pad - ID#439603) observed a fire break out on the Castle 7 triplex unit (also on Gregory pad). Flow hands immediately shut in the Janets before evacuating the site as the flames grew larger and engulfed the Gregory/Castle pad. Fire crews were immediately dispatched and arrived on site around 0530. Pumpers, safety men, and SD employees were on site directing emergency personnel to the location and providing them with information regarding the fire. The fire was extinguished by approximately 0615. The explosion and fire also caused approximately 100 BBLs of produced water and oil to be spilled into the secondary lined containment of the triplexes on the Castles 7 and 8 and approximately 5 BBLs of oil and produced water to be spilled on the pad outside of secondary containment (no fluids of any kind went off location). At this time the cause of the incident is unknown pending further investigation.
