Reclamation - Storm Water - Pit

Interim Reclamation:

Date Interim Reclamation Started: _____ Date Interim Reclamation Completed: _____

Land Use: _____

Comment: Project area is surrounded by open sagebrush and greasewood shrubland. Revegetation is progressing within portions of the interim reclamation areas, although sparse and weedy in the western project area. This needs to be monitored and seeding will be needed if desirable cover is not increasing during the 2019 growing season.

Comment: A cobble run-down is installed in a portion of the western project area gully. It appears that stormwater flows are continuing to erode the gully, although it is difficult to determine when erosional patterns observed were formed. See attached photos. This needs to be monitored and if it is determined that erosion is continuing, then additional stormwater controls are required downstream of the cobble rundown.

Corrective Action:

Date: _____

Pits: NO SURFACE INDICATION OF PIT
