 VEGETATIVE COVER \_\_\_\_\_

Comment:

Inspection #668700626 dated 5/8/2013 documented poor growth, debris and erosion on location and required operator to re-contour and re-vegetate the location.

Debris appears to have been removed, location re-contoured and erosion degradation was not evident. However, location is not progressing towards COGCC 1000 series reclamation requirements and standards; location remains predominantly bare and exposed soil with little desirable perennial vegetative establishment. See attached photo document. Additional reclamation activities will be required.

Corrective Action:

Perform reclamation in accordance to COGCC 1000 series rules and establish vegetation with total perennial, non-invasive uniform plant cover of at least eighty (80) percent of pre-disturbance or reference area levels. Use a seed mixture requested by the surface owner, or a mixture prescribed by the local county NRCS. Ensure erosion controls are implemented to stabilize the seeded soil, and continue to monitor and manage this site until Final Reclamation has passed. Revegetation activities shall be complete no later than 11/30/2018.
