Oil and Gas Location Assessment

☒ New Location ☐ Refile ☐ Amend Existing Location Location#: _____

This Oil and Gas Location Assessment is to be submitted to the COGCC for approval prior to any ground disturbance activity associated with oil and gas operations. Approval of this Oil and Gas Location Assessment will allow for the construction of the below specified Location; however, it does not supersede any land use rules applied by the local land use authority. Please see the COGCC website at <http://cogcc.state.co.us/> for all accompanying information pertinent this Oil and Gas Location Assessment.

Location ID:

457671

Expiration Date:

09/26/2021

☒ This location assessment is included as part of a permit application.

CONSULTATION

- ☐ This location is included in a Comprehensive Drilling Plan. CDP # _____
- ☐ This location is in a sensitive wildlife habitat area.
- ☐ This location is in a wildlife restricted surface occupancy area.
- ☐ This location includes a Rule 306.d.(1)A.ii. variance request.

FOR MULTI-WELL PADS AND PRODUCTION FACILITIES WITHIN DESIGNATED SETBACK LOCATIONS ONLY:

- ☐ Check this box if this Oil and Gas Location has or will have Production Facilities that serve multiple wells (on or offsite) and the Production Facilities are proposed to be located less than 1,000 feet from a Building Unit. *(Pursuant to Rule 604.c.(2)E.i., the operator must evaluate alternative locations for the Production Facilities that are farther from the Building Unit, and determine whether those alternative locations were technically feasible and economically practicable for the same proposed development.)*
- ☐ By checking this box, I certify that no alternative placements for the Production Facilities, farther from the nearest Building Unit, were available based on the analysis conducted pursuant to Rule 604.c.(2)E.i.

In the space below, explain rationale for siting the multi-well Production Facility(ies) that supports your Rule 604.c.(2)E.i determination. Attach documentation that supports your determination to this Form 2A.

OPERATOR COMMENTS AND SUBMITTAL

Comments

Noble respectfully submits this location assessment application which consists of 6 wells. Spill Prevention Control and Countermeasures (SPCC) plans are in place to address any possible spill associated with Oil & Gas operations throughout the state of Colorado in accordance with CFR 112. The twinning and exception location waiver language can be found in the attached SUA, (page 1).

ADDITIONAL COMMENTS

- Location is within the COGCC rules 318A. (GWA)

- o A dear director letter will be required with the Form 2 applications to apply under the COGCC rules of 318A.a and 318A.c

- o Field Land is currently working with Denver Land to provide a copy of the SUA that covers the SUA language for 318A.a and 318A.c

- Cultural Measurements were measured from the nearest proposed well as NBL intends to P&A the existing Kate White D29-8 (05-123-16417) prior to construction.

- There are no Building Units within 1,000' of the Oil and Gas location and therefore a Facility Layout drawing and Rule 305.a.(2) certification has not been provided with the submittal of this application.

- Noble Energy respectfully requests to set two (2) MLVT's (Modular Large Volume Tank) to the D29-22 Pad.

- o Included in the Form 2A are the details requested per the COGCC Modular Large Volume Tank Policy.

- ? Vendor: A&W Water Services

- ? Number & Size: Two (2) 40,000 bbls MLVT (160' diameter)

- ? Anticipated Time Frame on location: 4 Months

- Please note that setting the MLVT will not increase our permitted area of disturbance from 11.0 acres. The distance to the nearest Building Unit owner is 5280' +.

- Please see the attached Location Drawing indicating where the MLVT's will be located with respect to other facility equipment and property boundaries. Please also see attached the Operator's certification that the MLVT will be designed and implemented consistent with the June 13th, 2014 COGCC MLVT policy.

WATER RESOURCES

Basis for Sensitive Area Determination:

The two closest wells with notable static water level readings (Permit 7065-R, Permit 22932-A) have a depth to ground water (static water level) of less than 25 feet (12' 16' depths).

Nearest Down-gradient surface water: Hydrology Map indicates no visible surface water within 1,000 feet. Biological Resources Surveys reported one waterbody (dry creek bed with OHWM) located approximately 4,185 feet west of the edge of disturbance; wetlands located approximately 4,160 feet west and 2,934 feet northwest of the edge of disturbance (field confirmed).

Nearest Domestic Water Well (permit number and distance from location): Permit 1819 is a domestic well located approximately 8,808 feet west of the edge of disturbance.

Estimated depth to ground water at Oil and Gas Location (provide explanation): Permit 22932-A is the closest water well and best indication of depth to ground water (static water level). Permit 22932-A has a depth of 16 feet and is located approximately 2,751 feet northwest of the edge of disturbance. The average depth of the two closest water wells is 14 feet.

I hereby certify that the statements made in this form are, to the best of my knowledge, true, correct and complete.

Conditions Of Approval

All representations, stipulations and conditions of approval stated in this Form 2A for this location shall constitute representations, stipulations and conditions of approval for any and all subsequent operations on the location unless this Form 2A is modified by Sundry Notice, Form 4 or an Amended Form 2A.

<u>COA Type</u>	<u>Description</u>
	The Approved Form 2A permit will be posted at the location during construction, drilling, and completions operations.

Best Management Practices

<u>No</u>	<u>BMP/COA Type</u>	<u>Description</u>
1	General Housekeeping	Housekeeping will consist of neat and orderly storage of materials and fluids. Wastes will be temporarily stored in sealed containers and regularly collected and disposed of at offsite, suitable facilities. If spills occur prompt cleanup is required to minimize any commingling of waste materials with stormwater runoff. Routine maintenance will be limited to fueling and lubrication of equipment. Drip pans will be used during routine fueling and maintenance to contain spills or leaks. Any waste product from maintenance will be containerized and transported offsite for disposal or recycling. There will be no major equipment overhauls conducted onsite. Equipment will be transported offsite for major overhauls. Cleanup of trash and discarded materials will be conducted at the end of each work day. Cleanup will consist of patrolling the roadway, access areas, and other work areas to pickup trash, scrap debris, other discarded materials, and any contaminated soil. These materials will be disposed of properly.
2	Storm Water/Erosion Control	Stormwater management plans (SWMP) are in place to address construction, drilling, and operations associated with Oil & Gas development throughout the state of Colorado in accordance with Colorado Department of Public Health and Environment (CDPHE) and General Permit No.'s: COR03N578; COR03N579; COR03N580; and COR03O059. The basis for the Sensitive Area Determination for D29-22 well pad is the presence of shallow groundwater observed in two wells approximately 0.5 miles from the site. At this distance, stormwater from the site is unlikely to have negative impacts on the shallow groundwater identified; however, Noble will implement stormwater BMPs to minimize erosion and transportation of sediment off-site. The planned stormwater BMPs include stabilizing soil stockpiles with tracking and/or hydromulch; the use of stormwater diversions such as ditches; and BMPs that will slow stormwater runoff and settle out sediment, such as sediment traps and ripping. However, BMPs may be changed or modified during or after pad construction, as needed.
3	Dust control	Planning: Noble shall employ practices for control of fugitive dust caused by their operations. Such practices shall include but are not limited to the use of speed restrictions, regular road maintenance, restriction of construction activity during high-wind days, and silica dust controls when handling sand used in hydraulic fracturing operations. Additional management practices such as road surfacing, wind breaks and barriers, or automation of wells to reduce truck traffic may also be used if technologically feasible and economically reasonable to minimize fugitive dust emissions.
