### COA Type

### Description

	<p>Drilling/Completion Operations: The following COA will apply: COA 11 - The moisture content of water/bentonite based mud (WBM) generated drill cuttings managed onsite shall be kept as low as practicable to prevent accumulation of liquids greater than de minimis amounts. After drilling and completion operations have been completed, if any of the WBM drill cuttings will remain on the well pad location (cuttings management area, the cut portion of the pad, cuttings trench, dry cuttings drilling pit, or utilized in onsite interim reclamation activities), they must be sampled and meet the applicable standards of Table 910-1. No liners (if used) are allowed to be disposed of with the drill cuttings. Offsite disposal of cuttings to another oil and gas location shall not occur without prior approval of a Form 4 Sundry Notice (requesting a variance from Rule 907.e.(1).) specifying disposal location and waste characterization method. Commercial disposal of drill cuttings will require notification (no prior approval) to COGCC via a Form 4 Sundry Notice.</p>

<b>No</b>	<b><u>BMP/COA Type</u></b>	<b><u>Description</u></b>
1	Drilling/Completion Operations	The Scott 32C-36-692 (045-11435), an existing well on the pad was logged with open-hole neutron log with gamma-ray, from TD into the surface casing. All wells on the pad will have a cement bond log (CBL) with gamma-ray run on production casing (or on intermediate casing if production liner is run) into the surface casing. The Form 5, Completion Report, for each well on the pad will list all logs run and have those logs attached. The Form 5 for a well without open-hole logs will state "No open-hole logs were run" and will clearly identify the type of log and the well (by API# 045-11435 ) in which open-hole logs were run.

Engineer	Vanguard has submitted the proposed WBD via Form 4 to comply with the Mamm Creek Policy per COGCC request.	09/24/2018
Engineer	<p>Offset water well check: COGCC evaluated offset water wells within one mile of this proposed well's surface hole location. This information was used in addition to locally-available geophysical logs and hydrogeologic information to evaluate the adequacy of the operator's proposed surface casing setting depth. The deepest water well within one mile is 495 feet. A one mile radius of investigation of all offset fresh water wells has determined that the deepest surface casing required to protect the aquifers is a depth of 520' (includes a 50' margin of additional protection corrected for elevation differences).</p> <p>Offset Well Evaluation: Offset wells within 1500 feet of the planned wellbores on this pad meet standards. No mitigation required.</p> <p>Operator's proposed cement top may not meet current standards. Operator to adjust cement quantity as needed.
