That is what I thought. Could you add that note to the "ATTACHMENTS" for the supplemental?

Thanks

Subject: RE: Spill/release Point 202328 closure request

Thanks for getting back to me. The report isn't very clear, sorry about that!

In October 2014, the final excavated area measured 23 feet by 40 feet by 14 feet deep. Although a soil sample was collected at 9', the excavation continued to a total depth of 14', so that impacted soil sampled at 9' was removed from the excavation.

Please let me know if you have any other questions.

Sincerely,
Rachel

Rachel,

Based on the info provided I can't find where the 10/2014 sample elevated TPH at the SS-Clyde 2-Base 1 9 foot depth sample was eliminated by a "clean" sample. Am I missing something?

Bob

Subject: RE: Spill/release Point 202328 closure request

Hi Rachel,

I have closed the open spill. The site is still under investigation/monitoring under remediation # 8798. Updates and/or request closure for the remediation is accomplished by filing a supplemental eForm 27 for this remediation. The remediation number should correctly self-populate the supplemental 27.

If you have any questions, please let me know.

Bob,
Please see the attached report documenting our closure request for Spill/Release Point 202328. The original spill report was pre e-form, so we're submitting our request via email.

Please let me know what questions you have. We look forward to your review.
Sincerely,
Rachel

Subject: RE: Spills

Hi Rachel,

The subject spill report (Form 19 Document #2148536, Spill/Release Point 202328) is located in Bob Chesson's area. That being said, let me shine some light on what you're experiencing. It is a pre-eForm version of a spill report, hence your inability to submit an eForm Supplemental Report. Please send all information supporting your request for closure to Bob. He'll review it, and if he finds it to be adequate, he'll upload the information to the file and close the spill report.

Chris

Subject: FW: Spills

Chris,
I'm trying to submit a closure request for the Clyde Williams 2 facility on behalf of GWOC. The closure form 19 is in draft form. Many of the fields from the initial Form 19 are "grayed" out and will not let me enter data, however, the form can't be validated and submitted without these fields.
Can you please advise?
Document #401771070

Thanks,
Rachel

Subject: Spills

Rachel – see below. Bob wants us to close these Form 19s or migrate to a F27 at William Clyde and Lewton H1. Can you forward me the William Clyde report and closure request when you get a chance? I'll review and we can get that in. Also, let's discuss potential next steps at Lewton.

Hi Ben,

Attached are 3 open/unresolved spill/release reports for Great Western in Adams county.

The COGCC desires to either close a spill/release within 90 calendar days of initial report, or, if the spill/re/release cannot be closed in that time to a remediation via a Form 27. As of this date these spill(s)/release(s) remains as open issues which have exceeded the 90-day time frame.

To close these spill (NFA determination) GW needs to file supplemental form 19.s with a Request For Closure and supporting documentation. information is available that would warrant migrating this spill to a remediation (form 27), then GW could accomplish that at any time.

If you have any questions or need information, please let me know.

Thanks.

Bob
