Best Management Practices

No	BMP/COA Type	Description
1	Planning	<ul style="list-style-type: none"> - Maximize the utility of surface facilities by developing multiple wells from a single pad (directional drilling), and by collocating multipurpose facilities (for example, well pads and compressors) to avoid unnecessary habitat fragmentation and disturbance of additional geographic areas. - Combine and share roads to minimize habitat loss/fragmentation - Use existing roads where possible - Combine utility infrastructure (gas, electric, and water) planning with roadway planning to avoid separate utility corridors - Where possible, consolidate pipeline and existing roadways, or roadways that are planned for development - Maximize the use of directional drilling to minimize habitat loss/fragmentation - Maximize use of long-term centralized tank batteries to minimize traffic - Maximize use of remote telemetry for well monitoring to minimize traffic - Phase and concentrate development activities, so that large areas of undisturbed habitat for wildlife remain.
2	Drilling/Completion Operations	<ul style="list-style-type: none"> - TEP will ensure 110 percent secondary containment for any volume of fluids contained at the well site during drilling and completions operations. - TEP will implement best management practices to contain any unintentional release of fluids. - Either a lined drilling pit or closed loop system will be implemented
3	Interim Reclamation	<ul style="list-style-type: none"> - Utilize staked soil retention blankets for erosion control and reclamation of large surface areas with 1.5:1 or steeper slopes. Avoid use of plastic blanket materials. - Remove well pad and road surface materials that are incompatible with post-production land use and re-vegetation requirements - Use only certified weed-free native seed in seed mixes, except for non-native plants that benefit wildlife - TEP will use certified, weed free grass hay, straw, hay or other mulch materials used for the reseeded and reclamation of disturbed areas. - Reduce visits to well-sites through remote monitoring (i.e. SCADA) and the use of multi-function contractors. - Install and use locked gates or other means to prevent unauthorized vehicular travel on roads and facility rights-of-way.
