Best Management Practices

<u>No</u>	<u>BMP/COA Type</u>	<u>Description</u>
1	Planning	<ul style="list-style-type: none"> - Combine and share roads to minimize habitat loss/fragmentation - Use existing roads where possible - Combine utility infrastructure (gas, electric, and water) planning with roadway planning to avoid separate utility corridors - Design roads with visual and auditory buffers or screens (e.g., topographic barriers, vegetation, and distance). - Phase and concentrate development activities, so that large areas of undisturbed habitat for wildlife remain.
2	Interim Reclamation	<ul style="list-style-type: none"> - Utilize staked soil retention blankets for erosion control and reclamation of large surface areas with 1.5:1 or steeper slopes. Avoid use of plastic blanket materials. - Use only certified weed-free native seed in seed mixes, except for non-native plants that benefit wildlife - TEP will use certified, weed free grass hay, straw, hay or other mulch materials used for the reseeding and reclamation of disturbed areas. - Install exclusionary devices to prevent bird and other wildlife access to equipment stacks, vents and openings.
