Don & Matt,

I have reviewed the referenced Form 2A Oil & Gas Location Assessment and have the following comments.

1) In the Location Identification section Highpoint Operating has indicated this proposed Oil & Gas Location's reference point is 1,101 feet from the west section line with a Latitude & Longitude of 40.970000 & -104.426031. However, the Location Drawing indicates proposed well Fox Creek 34-0164B is the location's reference point. The Form 2 APD for this well indicates it will be 1,011 feet from the west section line with a Latitude & Longitude of 40.969959 & -104.425031. Please see the attached screenshot from our GIS Online Map tool for where the wells and the Location map to. So it appears there were key stroke errors when filling out the Location Identification section of the Form 2A. If the Form 2 APD for the Fox Creek 34-0164B well is correct, I would like to correct the Form 2A so that the Location Identification information agrees across both Forms.

2) During my review it appears the northern portion of this proposed Oil & Gas Location will overlap onto the 51-Peetz gravelly sandy loam, 5-20 percent slopes NRCS Soil Unit. Please send me the NRCS Map Unit Description for this soil unit and I will add it to the Form 2A.

Please respond to this correspondence by December 8, 2018. If you have any questions, please contact me. Thank you.

Doug Andrews

Hello Doug –

I wanted to follow up with you on your email below.

The Form 2 APD for the Fox Creek is correct for the Fox Creek 34-0164B, please correct the Form 2A to match.

Also, I have attached the 51 –Peetz gravelly sandy loam, 5-20 percent slopes NRCS Soil Unit Description.

If there is anything else you need or catch, please let me know.

Thank you!

Melissa Luke
