## Best Management Practices

<u>No</u>	<u>BMP/COA Type</u>	<u>Description</u>
1	Drilling/Completion Operations	Open-Hole Resistivity Log with Gamma Ray Log will be run from the kick-off point into the surface casing on one of the wells drilled. A Cement Bond Log with Gamma-Ray will be run on the production casing, or on the intermediate casing if a production liner is run. The horizontal portion of the wellbore will be logged with a measured-by-drilling gamma-ray-log. The form 5, Completion Report, will list all logs run and have those logs attached.
2	Drilling/Completion Operations	If a skid is performed for the subject well, the only required BOPE tests will be for any broken BOPE connections, as long as full BOPE test was performed at the beginning of the pad, and as long as all necessary BOPE tests are completed at least every 21 days during the pad operations.
