Subject: Re: Koop 1 Remediation

Elizabeth,

I agree with this plan and put an internal note in the well file for modified plugging orders replacing the approved plans from Form 6N doc #401721066 WELL ABANDONMENT REPORT (INTENT).

Thanks for calling,

Dirk Sutphin, PE

Dirk,

Per our phone discussion, to finish the remediation on the Koop 1, Bison is going to pump a 200' plug at 1400', come up to 550' and fill the remainder of the hole to surface with cement. Please confirm that this will achieve adequate isolation of all required zones.

Thanks for your help on this well!

Elizabeth Kane
