Hi Diana/Steve

Sidetrack update for PRONGHORN 24-8-5XRLNB API#05-123-45068. We attempted to sidetrack the well from 10,600' with no success. Per our conversation, we'd like to proceed with sidetracking the wellbore a second time as follows:

- i. Explanation of the situation that has resulted in the need to sidetrack – **Bit box from RSS tool and PDC bit twisted off from drilling BHA. Unable to fish tools from wellbore. Attempted sidetrack at 10,600' with no separation from original wellbore.**
- ii. Total measured depth reached in the wellbore being plugged back – **11,203' MD**
- iii. Casing set – size(s) and measured depth(s) – **9-5/8" surface casing set at 1605' MD. No other casing set.**
- iv. Description of fish in the hole (if any) – including top and bottom measured depths **Fish is approximately 2 ft long, sitting from 11,203' to 11,201'.**
- v. Description of proposed plugs: setting measured depths, heights, and cement volumes – **No plugs will be set, open hole sidetrack.**
- vi. Type of cement to be used for all plugs, including slurry weight (ppg) and yield (cf/sk) – **No plugs will be set, open hole sidetrack.**
- vii. Measured depth of proposed sidetrack kick-off point – **Kick off point will be at +/- 6,268' MD (updated MD from original sidetrack attempt)**
- viii. Proposed objective formation(s) for sidetrack hole – **same target formation, Niobrara B**
- ix. BHL target for sidetrack hole – **Same BHL target as original wellbore.**

We will submit a Sidetrack Form 2 within 24 hours. Please let us know if you have any

questions.

Thanks!
