Best Management Practices

No	BMP/COA Type	Description
1	Drilling/Completion Operations	Logging: One of the first wells drilled on the pad will be logged with open-hole Resistivity Log and Gamma Ray Log from the kick-off point into the surface casing. All wells on the pad will have a cement bond log with gamma-ray run on production casing (or on intermediate casing if production liner is run) into the surface casing. The horizontal portion of every well will be logged with a measured-while-drilling gamma-ray log. The Form 5, Completion Report, for each well on the pad will list all logs run and have those logs attached. The Form 5 for a well without open-hole logs shall clearly state "No open-hole logs were run" and shall clearly identify (by API#, well name & number) the well in which open-hole logs were run.
2	Drilling/Completion Operations	Anti-Collision: Upland will perform an anti-collision evaluation of all active (producing, shut in, or temporarily abandoned) offset wellbores that have the potential of being within 150 feet of a proposed well prior to drilling operations for the proposed well. Notice will be given to all offset operators within 150 feet prior to drilling.

1	This APD, submitted by Upland Exploration LLC, is subject to the HighPoint Operating Corporation (HPOC) spacing applications assigned docket numbers 180700572 and 180700574. Per the spacing applications listed, HPOC plans to develop these units on a 1280 acre unit, two mile lateral basis. The Upland permit as submitted (on a 320 acre, one mile lateral basis) will create waste. HPOC requests that COGCC staff conduct a technical review.	08/24/2018
