**Photo 2.** Photo taken south of the well location access road, facing West. It does not appear the access road was cross-rippled. COGCC Staff did not perform a decompaction test but the Operator should have cross-rippled to a depth of 18 inches.

**Photo 3.** Photo taken from the eastern well location, facing Southwest. No equipment was observed at the location. It is unclear whether or not the location was cross-ripped. It appears the location was only ripped one way. Operator may be required to perform additional reclamation activities (i.e., decompaction) if vegetation does not meet Rule 1004 standards.
