3 ☒ CA# 118738

Corrective Action: Stormwater design and controls on the well pad are not sufficient as evidenced by significant sediment migration and deposition. Design and install stormwater controls that effectively manage sediment deposition and erosion within the project area. Significant changes to current system will be needed and use of a stormwater engineer is recommended. Corrective action date will remain to document time since original corrective action date. Work should be completed no later than October 5, 2018. Once controlled, seeding of areas with sediment deposition and disturbed soils will likely be required.
