As defined in COGCC 100-Series Rules

Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

The driver of a truck carrying oil-based mud (OBM) did not completely close the valve on the back of his truck before moving. 2-3 bbl of OBM was spilled on the location before he noticed. The spill was well within the location, on hard-packed roadbase. Solidification material was spread over the spill and allowed to soak up the OBM. The solidification material was scooped up and placed in containment to be disposed of along with the oil-based drill cuttings from the upcoming drilling. Roadbase was scraped away with a loader until no OBM was visible.
