## SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

The impacted soil was removed via excavation activities completed on September 14, 2015. The dissolved benzene groundwater impacts exceeding the COGCC Table 910-1 Regulatory Limits will be removed using an insitu technology. Additional groundwater assessment is required. Impacted groundwater will be delineated by monitoring wells and monitored for natural attenuation.

## REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Five groundwater monitoring wells were installed to delineate dissolved phase BTEX impacts. These wells will be sampled for BTEX by EPA Method 8260c on a quarterly basis.
