COMMENTS:

Noble Energy respectfully request continued TA status. The well is closed to the atmosphere via a CIBP bridge plug set at 6,688' on 6/14/2017. The well closed to the atmosphere and locked out and tagged out at the master valve. The well was completed in the Niobrara-Codell, formation. This well was TA'd for an off-set frac, SRC's Pad. Noble will return the well to production once a rig is available - unknown time frame as we are currently working through a large back log of P&A work for offset mitigation work for DJ basin activity. Noble will run an MIT if the well is still TA'd after two years. Form 5A to change the status to TA was submitted on doc#401370596.

H2S REPORTING

Data Fields in this section are intended to document Sample and Location Data associated with the collection of a Gas Sample that is submitted for Laboratory Analysis.

Gas Analysis Report must be attached.

H2S Concentration: _____ in ppm (parts per million) Date of Measurement or Sample Collection _____

Description of Sample Point:

Absolute Open Flow Potential _____ in CFPD (cubic feet per day)

Description of Release Potential and Duration (If flow is not open to the atmosphere, identify the duration in which the container or pipeline would likely be opened for servicing operations.):

Distance to nearest occupied residence, school, church, park, school bus stop, place of business, or other areas where the public could reasonably be expected to frequent: _____

Distance to nearest Federal, State, County, or municipal road or highway owned and principally maintained for public use: _____
