Please see the summary below detailing our plans to sidetrack the Critter Creek 16-6005BW (API 05-123-47309). Please let us know if you need any additional information.

- After two separate attempts to run 7" intermediate casing we were unable to proceed past the Sharon Springs formation at 7676' MD (7241'TVD). Between casing runs an aggressive cleanout run was performed as well.
- As a result, we have made the decision to openhole sidetrack to avoid the section of sloughing wellbore.
- The total measured depth of the wellbore which we are abandoning is 8095' MD 8-3/4" hole size.
- The 9-5/8" surface casing string is set and cemented at 1531' MD with cement to surface.
- There will be a 400' cement plug pumped starting inside the 8-3/4" open hole from 6600' to 7000' MD. The estimated volume of cement (+ 20% excess) is 195 cubic ft.
- Cement slurry for plug: Class G, 17 ppg, 0.9912 cu ft./sack
- The Sidetrack KOP is estimated to be 6900' MD.
- The objective formation for the sidetrack hole is the Niobrara formation, which is the same objective formation as the wellbore being abandoned.

The PBHL of the sidetrack hole is the same as the wellbore being abandoned.

Best Management Practices

<u>No</u>	<u>BMP/COA Type</u>	<u>Description</u>
1	Drilling/Completion Operations	HighPoint will adhere to the COGCC Policy for Bradenhead Monitoring effective 5/29/12.
2	Drilling/Completion Operations	One of the first wells drilled on the pad will be logged with open-hole Resistivity Log and Gamma Ray Log from the kick-off point into the surface casing. All wells on the pad will have a cement bond log with gamma-ray run on production casing (or on intermediate casing if production liner is run) into the surface casing. The horizontal portion of every well will be logged with a measured-while-drilling gamma-ray log. The Form 5, Completion Report, for each well on the pad will list all logs run and have those logs attached. The Form 5 for a well without open-hole logs shall clearly state "No open-hole logs were run" and shall clearly identify (by API#, well name & number) the well in which open-hole logs were run.
