## FOR MULTI-WELL PADS AND PRODUCTION FACILITIES WITHIN DESIGNATED SETBACK LOCATIONS ONLY:

- Check this box if this Oil and Gas Location has or will have Production Facilities that serve multiple wells (on or offsite) and the Production Facilities are proposed to be located less than 1,000 feet from a Building Unit. *(Pursuant to Rule 604.c.(2)E.i., the operator must evaluate alternative locations for the Production Facilities that are farther from the Building Unit, and determine whether those alternative locations were technically feasible and economically practicable for the same proposed development.)*
- By checking this box, I certify that no alternative placements for the Production Facilities, farther from the nearest Building Unit, were available based on the analysis conducted pursuant to Rule 604.c.(2)E.i.

In the space below, explain rationale for siting the multi-well Production Facility(ies) that supports your Rule 604.c.(2)E.i determination. Attach documentation that supports your determination to this Form 2A.

Distance to nearest

downgradient surface water feature: 670 Feet

water well: 3174 Feet

Estimated depth to ground water at Oil and Gas Location 40 Feet

Basis for depth to groundwater and sensitive area determination:

Nearest water well is Permit 64343 located to the SW with a reported static water level of 18'. Topographic maps show this well as approximately 22' below location. Correcting for this difference results in an estimated 40' depth to groundwater at this location. Downgradient surface water feature is a stream to the southeast.

Is the location in a riparian area:  No  Yes

Was an Army Corps of Engineers Section 404 permit filed  No  Yes If yes attach permit.

## Best Management Practices

No	BMP/COA Type	Description
1	General Housekeeping	Keep well site location, road and pipeline easement free of noxious weeds, litter and debris.
2	Wildlife	The operator agrees to use hospital-grade mufflers on production equipment including: compressors, pump jacks, or other motors necessary to run operations at the site. Mufflers will be pointed upward to dissipate potential vibration .(Not applicable for any equipment that will be enclosed to mitigate noise.)
3	Wildlife	The operator agrees to utilize combustion chambers or enclosed flaring devices to eliminate open flares at this location.
4	Material Handling and Spill Prevention	<p>All cuttings generated during drilling with oil based mud (OBM) must be kept in tanks or containers or placed on a lined and bermed portion of the well pad prior to disposition.</p> <p>The moisture content of all cuttings managed onsite or transported offsite shall be kept as low as practicable to prevent accumulation of liquids greater than the minimum amounts.</p> <p>Flowback and stimulation fluids must be sent to enclosed tanks, separators, or other containment or filtering equipment before the fluids can be placed into any pipeline, storage vessel, or other open top containment located on the well pad or into tanker trucks for offsite disposal.</p> <p>No open top tanks can be used for initial flowback fluids containment.</p> <p>Secondary containment for flowback storage tanks shall meet the requirements of Rule 906.d.(1).</p>
5	Construction	No construction or routine maintenance activities will be performed during periods when the soil is too wet to adequately support construction equipment.
6	Construction	Light sources will be directed downwards and away from occupied structures.
7	Emissions mitigation	Operator shall comply with COGCC's current NOTICE TO OPERATORS: Rule 912. VENTING OR FLARING PRODUCED NATURAL GAS – STATEWIDE.
