Operator Comments:

AusCo Petroleum, Inc is planning to use the Jet Drilling Technology to test the Niobrara Shale in the JW Powell 23-35 well, NESW Section 35-19S-70W, Fremont County, CO. This technology uses high pressurized fluids at a very low rate that are directed thru a jet head with erosional openings at various angles and sizes for penetration and reverse openings for cuttings liberation. A deflecting mechanism is landed with the production tubing and oriented with a gyro at the target depth. A casing cutting mechanism rotary cuts (0.5 - 1") thru casing and laterally into the formation as far as 300'. Laterals can be created in multiple directions and depths. AusCo Petroleum's plan for the JW Powell 23-35 is to drill 6 laterals, each up to 300', at three levels, 5385', 5460', and 5550'.

I hereby certify all statements made in this form are, to the best of my knowledge, true, correct, and complete.
