PROPOSED SAMPLING PLAN

Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

Propose adequate soil samples taken from the pit berm after one year of biodegradation has occurred. Adequate samples would be taken to define successful or unsuccessful biodegradation by CGRS out of Fort Collins, CO.

Proposed Groundwater Sampling

☐ Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Dry stained soil only present

Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? (Number, analyses, and locations of samples):

No surface water present

Additional Investigative Actions

☒ Additional alternative investigative actions described in attached Site Investigation Plan (summary):

Propose to remove stained soil around the wellhead/exterior pit berm and confirm stained soil has been adequately removed via visual and olfactory investigation.

REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No _____

SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Requesting permission to treat onsite per rule 907e.(2). Proposed plan would be to remove the stained soil from around the wellhead and place on the berms of the pit. Additional stained soil on the outside of the pit berm would be placed on the pit berm. The pit berm soil biodegradation would be enhanced by tilling. After one year of biodegradation occurs soil samples would be taken to evaluate the process.

REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Requesting permission to treat onsite. Move stained soil to be on the pit berm and enhance biodegradation by tilling. This plan is the most cost effective remediation plan. This initial clean up work would be completed in January of 2019 (weather permitting). In January of 2020 soil samples would be taken by CGRS out of Fort Collins. Based off the soil samples a plan to remove or continue the process would be evaluated.
