Subject: Dodd WTS (#3-2) - Release

Good afternoon,

Red Willow had a produced water release at the Dodd WTS (#3-2) on January 5, 2019. A bushing broke (likely due to a freeze) and released approximate 190 bbls of produced water. The entire release was wholly contained within the secondary containment berm around the tank battery and approximately 190 bbl were recovered by vac truck and transferred to Basin for disposal. The water pump was immediately shut down, the line isolated, repaired within a couple hours and put back into service. This release occurred on "Fee" surface and will be submitted to the state (COGCC – Jim Hughes) as a courtesy. Please review the attached documents for further info and feel free to contact me if there are any questions or concerns.

Thanks,

Brian Conner
