DESCRIPTION OF IMPACT

Impacted?	Impacted Media	Extent of Impact	How Determined
Yes	SOILS	Undetermined.	Implementation of excavation and confirmation sampling activities .

INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

As required by the COGCC Rule 905.B, confirmation sampling was conducted below the produced water vessel at the Gutteresen 11, 22-25 & 25E tank battery.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

On January 4, 2019, one (1) soil sample (SS01) was collected below the former produced water vessel at approximately 4 feet below ground surface (bgs) and was submitted to Summit Scientific Laboratories (Summit) in Golden, Colorado for analysis of benzene, toluene, ethylbenzene, total xylenes (BTEX), naphthalene, total petroleum hydrocarbons (TPH) - gasoline range organics by USEPA Method 8260B, TPH - diesel range organics (DRO) by USEPA Method 8015, electrical conductivity (EC), and pH. Analytical results indicated that pH was out of compliance of the COGCC Table 910-1 standards. Based on the analytical results, the four soil samples (SS02 - SS05) collected from the sidewalls of the excavation and within the COGCC designated root zone (3 feet bgs) were submitted to Summit for analysis of pH and EC. Analytical results indicated that pH was in exceedance of the applicable regulatory standard in soil samples SS03 and SS04.

REMEDIAL ACTION PLAN

SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Remaining soils exhibiting pH levels in exceedance of regulatory standards will be mechanically excavated and transported to a licensed disposal facility.

REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Geochemical impacted soil will be mechanically excavated and transported to a licensed disposal facility. Confirmation soil samples will be collected from the final extent of the excavation and submitted for laboratory analysis of EC and pH. Analytical results will be summarized in a forthcoming report.
