#### COMMENTS:

Kerr-McGee Oil & Gas Onshore LP respectfully requests to have the permit Condition of Approval (COA) for the Cowboy 24-21HZ pad wells pertaining to offset mitigation changed from Option 1 or 2 to Option 4 per the DJ Basin Horizontal Offset Policy as reflected on the Form 2. Per offset well Operator conversations with COGCC Engineer Stephen Wolfe, alternative mitigation may be offered via Option 4.

Crestone Peak will temporarily abandon the six offset Sprague wells prior to frac operations commencing on the offset Cowboy 24-21HZ pad wells by setting RBPs above the highest perforated formation.

For annular mitigation, the bradenhead on the offset Sprague wells will be open and actively monitored for any pressure or fluid to surface during the frac operations of the Cowboy 24-21HZ well pad. Kerr-McGee will be ready to respond to any communication with the offset wells in a timely manner in order to prevent a buildup of pressure on the surface casing of the offset Sprague wells.

The offset Operator has provided Form 17s showing 0 psi on all wells. Form 17 tests were conducted and submitted to COGCC on February 12, 2019.
