Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

During the deliniation of spill 457569 2 inches of soil was removed at the eastern boundary of the spill. Laramie discovered a dark material in the soil. There was no sifnificant odor by staff was concerned about the constituent levels of the material since it appeared to be significantly different from the surrounding soils. Samples were collected and sent to a lab for analysis. The resultant analytical data indicates TPH DRO at 1690 mg/kg, Barium at 26,000 and SAR at 35.2. Laramie has communicated with the landowner (BLM, Jim Byers) on this discovery. Our intent would be to resolve/remediate spill 457569 (since the primary constituents of concern are SAR and EC) and address the legacy spill as a separate project.
