Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

On December 31, 2018, a release occurred due to corrosion in the surface casing at the Brown 32-35 wellhead. While placing the well back into production, approximately 0.25 BBLs of fluid were observed at the ground surface adjacent to well bore. Facility infrastructure was shut-in, and the wellhead has been plugged and abandoned. The release became State reportable on March 11, 2019, due to the quantity of impacted soil excavated. Soil excavation activities are ongoing and will be summarized in a forthcoming Supplemental Form 19 Spill/Release Report. A topographic Site Location Map showing the geographic setting of the release is provided as Figure 1.
