<p>On Thursday, March 28, 2019 at 11:27, I, Craig Carlile conducted an on-site inspection at location number: 331342</p> <p>This inspection was conducted in response to receipt of Accident Report Form 22, document number: 401982836</p> <p>Operated by: Creston</p> <p>While there I observed: Well(s) Producing</p> <p>While on location I visited with Mark Balderston of Crestone and reviewed the details of the accident report. There was no indication that any oil had escaped the secondary containment surrounding the temporary oil tanks. The gas line that serves to discharge flash gas from the temporary tanks to the flare apparently accumulated fluids that caused the flare to emit visible flame. Property damage appeared to be limited to the sound wall close to the emission burner, see Photo 1 attached. Any fluids that had accumulated within the berms had been removed at the time of the inspection, see Photo 2 &amp; 3 attached. This is a summary of the inspection report.</p>	carlilec	03/28/2019
