**General Comment:**

This is a follow-up inspection is in response to a complaint regarding remaining flowline and risers on the South Platter River (channel).

On September 6, 2018 the Logan County Water Conservation District filed a formal complaint (#200446233) indicating that abandoned flowlines and risers are currently exposed within the channel, are obstructing normal flow of water, and causing debris to collect on the exposed pipe leading to erosion to the main channel.

Corrective actions required operator to remove and cap exposed flowlines/risers and any remaining surface equipment by 11/15/2018

A follow-up inspection on 12/05/2018 documented that the corrective action was not addressed and flowlines/risers remained.

On 2/3/2019 operator submitted FIRR #401927400 stating corrective actions complete.

This inspection is to document compliance for the following corrective actions:  
1004.a: Removal of three (3) risers, flowline and remaining surface equipment.

Any corrective action(s) from previous inspections that have not been addressed are still applicable.

Comment:

Operator submitted FIRR 401927400 on 2/3/2019. Photos attached show operator removed risers/flowlines and reclamation was conducted on disturbed areas. .

Reclamation in-provess. All equipment/trash/debris associated with the location appears to have been removed per the corrective action. Germination from seeding activities over disturbed areas durring work evident. Continue to monitor the location for weeds and conduct reclamation as needed. Once location meets 1000 series standards, submit a form 4 and a vegetation transect will be conducted in a future growing season to evaluate compliance with reclamation standards.
