Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

During maintenance activities at the Walt 17-E tank battery (Location: 451799), the third party night operator was draining water from an oil tank and inadvertently left the valve cracked open. Approximately 12 bbls of oil were released into lined secondary containment. No fluids were released outside of secondary containment. The fluids were pumped out and put back into the production system. The pea gravel inside the secondary containment will be removed and hauled to an approved waste facility for disposal. The equipment will be cleaned with pressurized hot water and the liner will be inspected prior to backfilling with clean pea gravel.
