Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

During hot oiling activities at the Benson Farms 32C-23HZ well, approximately 11 barrels of oil were released outside of secondary containment. Approximately 1 barrel of oil was recovered. The petroleum hydrocarbon impacted soil was excavated. The assessment details and analytical results are summarized below. The topographic Site Location Map showing the geographic setting of the release is provided as Figure 1.

How was extent determined?

On April 25, 2019, seven soil samples were collected from the base of the shallow excavation and submitted for laboratory analysis of TPH, BTEX, and naphthalene. Laboratory analytical results indicated that TPH, BTEX, and naphthalene concentrations are in full compliance with COGCC Table 910-1 allowable levels at the extent of the excavation. Approximately 130 cubic yards of impacted soil were excavated and transported to Front Range Landfill in Erie, Colorado, for disposal. The general site layout, excavation dimensions, and soil sample locations are depicted on the Excavation Site Map provided as Figure 2. The soil sample analytical results are summarized in Table 1, and the laboratory analytical report is attached.

Soil/Geology Description:

Clay (CL)

No further action is required. Laboratory analytical results for the soil samples indicate that TPH, BTEX, and naphthalene concentrations are in full compliance with COGCC Table 910-1 allowable levels at the extent of the excavation. Based on the soil sample analytical results, Kerr-McGee is requesting a No Further Action status for this site.

CORRECTIVE ACTIONS

#1	Supplemental Report Date:	04/26/2019
Cause of Spill (Check all that apply)		
<input checked="" type="checkbox"/> Human Error	<input type="checkbox"/> Equipment Failure	<input type="checkbox"/> Historical-Unknown
<input type="checkbox"/> Other (specify)		
Describe Incident & Root Cause (include specific equipment and point of failure)		
During hot oiling activities at the Benson Farms 32C-23HZ well, an operator failed to close a valve, resulting in the release of approximately 11 barrels of oil outside of secondary containment. Stop work authority was immediately initiated.		
Describe measures taken to prevent the problem(s) from reoccurring:		
A safety stand down was held with contractors to reinforce stop work authority. Standard operating procedures are being reviewed/updated. The excavation will be restored to its pre-release grade.		
Volume of Soil Excavated (cubic yards): 130		
Disposition of Excavated Soil (attach documentation)		
<input checked="" type="checkbox"/> Offsite Disposal	<input type="checkbox"/> Onsite Treatment	
<input type="checkbox"/> Other (specify)		
Volume of Impacted Ground Water Removed (bbls): 0		
Volume of Impacted Surface Water Removed (bbls): 0		

REQUEST FOR CLOSURE

Spill/Release Reports should be closed when impacts have been remediated or when further investigation and corrective actions will take place under an approved Form 27.
