Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

The leak was discovered by the pumper early Thursday afternoon [4-25-2019]. The pumper immediately shut-in the well and drove to the location of the leak. An estimated 1.5 BO and 80 BW was leaked on the ground and drained to the north and northwest covering an area 10' wide by 75' long. The surface owner was contacted and a roustabout crew was called to come fix the leak and remove the impacted soil. There was no standing water or crude oil at the site. The roustabout crew arrived the next morning and fixed the line leak and picked up roughly two yards of impacted soil and relocated it to a location at the tank battery [a picture of the actual leak in the flowline will be submitted on a supplemental report].
