INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

This form has been prepared to satisfy the request of the COGCC pertaining to further groundwater sampling associated with a suspected release related to degraded flowlines. One groundwater sample will be collected beneath the location of the suspected historical release to assure compliance with COGCC Table 910-1 allowable limits. The initial investigation will be conducted using a hand auger and bailer.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

☐ Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

Proposed Groundwater Sampling

☒ Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

A borehole will be hand-augered to approximately 10-12 feet below ground surface, or until groundwater is encountered. One groundwater sample will be collected and analyzed for BTEX.

Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? (Number, analyses, and locations of samples):

SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Once a suspected release was indicated through staining during the decommissioning of the flowline, an excavation was conducted, and suspected impacted soil was removed and transported to a disposal facility as a best management practice. Approximately 480 cubic yards of suspected impacted soil was disposed of at the Front Range Landfill in Erie, Colorado. Transport and disposal records will be kept on file under usual and customary practice and are available upon request. Soil samples were collected and analyzed for organic (TPH and BTEX) and inorganic constituents (SAR, EC and pH) until the horizontal and vertical extents of the excavation were within COGCC Table 910-1 allowable limits.

REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

As needed, site specific soil and/or groundwater remediation plans will be developed and submitted to COGCC via supplemental Form 27.
