|-------------------|---|---------------------|
| UIC               | Discussed with operator need for cement squeeze at base of Navajo and decided that no remediation needed at this time. There may be cement stringers at the bottom of the Navajo making addition of more squeeze cement difficult or ineffective. Quality of cement below DV tool is not great until the Weber interval. If in future initial maximum injection volume of Navajo in UP 113x22 (API: 103-08606) is reached and operator requests additional volume this topic should be revisited. | 05/20/2019          |
| Engineering Tech  | CBL being submitted for well repair is on the right track of doc #402048355. Left track is of an offset well.   | 05/20/2019          |
