## DESCRIPTION OF IMPACT

Impacted?	Impacted Media	Extent of Impact	How Determined
No	SOILS	Refer to Figure 1 and Table 1.	Confirmation Soil Sampling

## INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

On April 29, 2019, an unknown buried concrete produced water vault was discovered during the plug and abandonment of the facility. PDC contacted the COGCC and was instructed to submit an Initial Form 27 and proceed with abandonment activities. Confirmation samples will be collected below the buried vault in accordance with COGCC Rule 905.b.

## PROPOSED SAMPLING PLAN

### Proposed Soil Sampling

Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Soil encountered below the produced water vault will be field screened for volatile organic compound (VOC) concentrations using a photoionization detector (PID). In addition, visual and olfactory observations of the soil will be documented. A confirmation soil sample will be collected below the vault and submitted for laboratory analysis of benzene, toluene, ethylbenzene, total xylenes (BTEX), naphthalene, total petroleum hydrocarbons (TPH) – gasoline range organics (GRO) by EPA Method 8260B, TPH – diesel range organics (DRO) by EPA Method 8015, pH by EPA Method 9045, and electrical conductivity (EC) by Standard Method (SM) 2510B. If groundwater is encountered below the vault, a soil sample will be collected from the unsaturated interval and submitted for laboratory analysis of the above-stated compounds.

### Proposed Groundwater Sampling

Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

If groundwater is encountered below the vault, a groundwater sample will be collected and submitted for laboratory analysis of BTEX by EPA Method 8260B.

### Proposed Surface Water Sampling

Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

## Additional Investigative Actions

## **SOURCE REMOVAL SUMMARY**

Describe how source is to be removed.

Soil encountered below the produced water vessel was field screened for volatile organic compound (VOC) concentrations using a photoionization detector (PID) [Table 2]. A confirmation soil sample (SS01) was collected below the vessel and submitted for laboratory analysis of benzene, toluene, ethylbenzene, total xylenes (BTEX), naphthalene, total petroleum hydrocarbons (TPH) – gasoline range organics (GRO) by EPA Method 8260B, TPH – diesel range organics (DRO) by EPA Method 8015, pH by EPA Method 9045, and electrical conductivity (EC) by Standard Method (SM) 2510B. The sample location and excavation extent are illustrated on Figure 1. Soil analytical results are summarized in Table 1 and VOC concentrations are summarized in Table 2. The laboratory report is included in Attachment A.

## **REMIEDIATION SUMMARY**

Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

No reportable hydrocarbon impacts were encountered during the removal of the produced water vessel.
