Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

A leak occurred in the injection line 90ft north of the wellhead. Brine water flowed in a narrow path to the southwest corner of the location where it mixed with an existing puddle of rain water into a 25' x 20' area. The spill was fully contained on the location. The injection pump was not running when the leak was found, it had gone down on low tank level. The injection line was closed off. 8 bbls of water were recovered with a vac truck. The extent of the contamination area was determined visually and with shovels. No further remediation activities are proposed. The injection line will be replaced to prevent problem from recurring.
