

Project Summary

Site Name: Decker B#1

Document No.: 2141568

Remediation Project: 8509

Site History:

Voluntary reclamation of the skim pit on the Decker was initiated in 2014 when a skim tank was installed.

Work Completed:

A Form 27 was submitted in July 2014 and approved by the Commission.

Excavation of the pit started in June 2014. The excavated soils were initially composted with manure in July 2015. In February 2016 the soils were mixed and tilled again. In June 2016 the soil was placed in windrows mixed with urea, turned and oxygenated. In August 2017 the windrows were mixed, turned and oxygenated.

Samples for the windrows were analyzed in September 2017. The sampling results were submitted to the Commission. Based on the analytical results, Fritzler Resources determined that the best course would be to remove and dispose of the soils. In October 2017, Fritzler removed and disposed of approximately 41.09 tons of soils at a Waste Management facility.

In the Spring of 2018, the area was disked, harrowed and a native grass mix was planted.

Remaining Work:

1. Sampling and analysis of the former land farmed area
2. Soil addendums and reseeding as may be required
3. Re-disking
4. Incorporate additional BMPs for runoff

The area to be reseeded is approximately 0.5 acres. Fritzler anticipates completing this work in 2019. It is possible that the area may need to be re-seeded in subsequent years.
