DESCRIPTION OF IMPACT

Impacted?	Impacted Media	Extent of Impact	How Determined
UNDETERMINED	GROUNDWATER	Approximately 48 inches bgs	Hand auger to depth and step out delineation
Yes	SOILS	Approximately 200 square feet	Hand auger and step out delineation

INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

A soil auger and PID meter was used to identify hydrocarbon impacts from collected soil samples. The extent of the spill area was preliminarily delineated.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

One grab sample was collected from the soil identified to contain the highest hydrocarbon impacts.

Proposed Groundwater Sampling

Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

A groundwater sample will be collected from water within the impacted area. The groundwater sample will be analyzed for TPH (GRO and DRO), BTEX, SVOCs, pH, and specific conductivity.

Proposed Surface Water Sampling

Will surface water samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Additional Investigative Actions

Additional alternative investigative actions described in attached Site Investigation Plan (summary):

The Mutual Ditch is located approximately 60 feet west of the spill area. Irrigation water is flowing at near full capacity of the ditch embankment. The ditch will be monitored daily adjacent to, and downstream of the spill area for potential oil sheen.
